

2020

Monthly Content Calendar & Communications Toolkit

**SEAFOOD
NUTRITION
PARTNERSHIP®**

Seafood Nutrition Partnership (SNP) is here to inspire Americans to enjoy seafood at least twice a week by showing how selecting, ordering and preparing seafood is simple and delicious!

Consumers are often overwhelmed by the options and information available about fish and shellfish. SNP can help! This toolkit can assist you in answering questions and inspiring content for consumers to make healthier choices for themselves and their families.

What is Seafood Nutrition Partnership?

SNP is an independent nonprofit grounded in science and guided by respected researchers, healthcare professionals, and academics, with a mission to create a healthier and smarter America through consumption of seafood. SNP addresses the biggest barriers to eating seafood — a lack of confidence in knowing how to select, buy, prepare and eat seafood — to encourage more Americans to consume fish, shellfish and omega-3s as part of a balanced diet.

How to Use This Toolkit

A Resource for All

Health, food, and nutrition observances present an opportunity to educate and energize consumers, co-workers, community members, and others. The purpose of this toolkit is to provide you with tips, helpful hints, recipes and more to share among your networks as you celebrate and promote seafood. This content is meant to inspire you and provide resources for:

[Community Events](#) | [Grocery Store Tours](#) | [Media Opportunities](#) | [Wellness Programs](#)

2020 CONTENT CALENDAR

JANUARY

Start Out Small

The new year is a time for a fresh, healthy start. This year, start off by taking small steps to balance your plate with seafood.

FEBRUARY

Heart Health

Heart disease is the leading cause of death for both men and women in the US. Heart disease can often be prevented when people make healthy choices, like eating more seafood.

MARCH

Try A New Bite

There are over 500+ species of delicious seafood. Try a new bite of seafood this month to mark National Nutrition Month.

APRIL

Sustainable Solutions

Seafood is the future of sustainable protein — it's a vital part of the diet that supports both human health and environmental health.

MAY

Women's Health

When pregnant or nursing moms should eat a variety of #Seafood2xWk. It can have numerous health benefits for both mom and the baby.

JUNE

Grilling

Skewered, smoked or straight-up seared, summer is here and it's time to head to the grill and get creative with your favorite fish.

JULY

Seafood for Athletes

In time for the Summer Games, eating seafood is a great way for athletes to get the protein and omega-3 fatty acids they need to become stronger.

AUGUST

Back to School

When kids eat at least two servings of seafood each week the benefits are big. The nutrients provided are essential for strong bones, brain development, and a healthy immune system.

SEPTEMBER

Family Meals

Seafood should be enjoyed as a part of your family meal. There are so many ways to incorporate seafood into your meals, whether fresh, frozen, canned or dried!

OCTOBER

National Seafood Month

Seafood is known as the "protein with benefits." Celebrate National Seafood Month and reel in the amazing benefits.

NOVEMBER

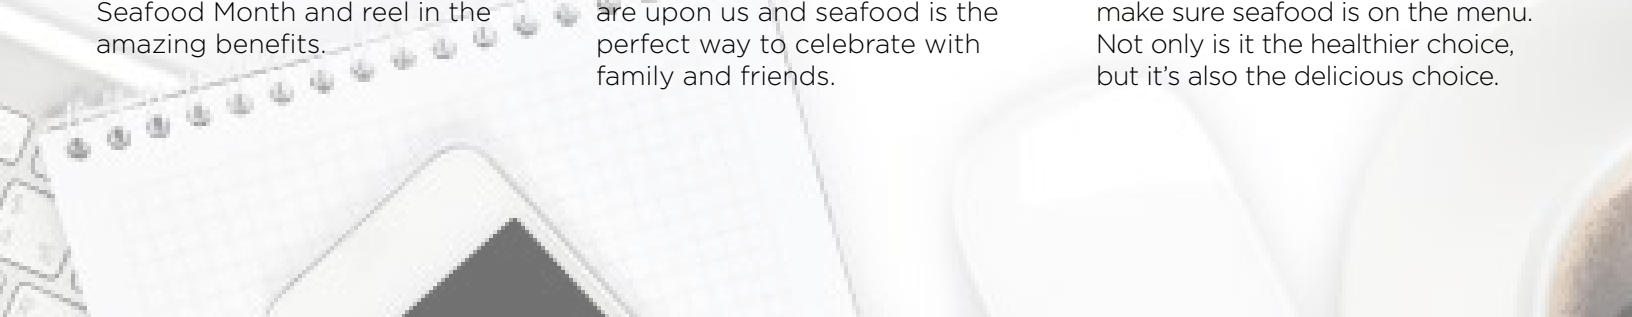

Celebrate with Seafood

From oyster stuffing to Feast of the Seven Fishes, the holidays are upon us and seafood is the perfect way to celebrate with family and friends.

DECEMBER

Healthy Holidays

Whether you're hosting a holiday gathering or attending a party, make sure seafood is on the menu. Not only is it the healthier choice, but it's also the delicious choice.

Eat Seafood: All the Reasons You Need

People feel good about seafood — they agree it's good for their health, it's a perfect choice when they want something special, or they love how it tastes. In fact, Americans are eating more seafood as they discover its great taste and healthy benefits. To help consumers meet the goal of eating seafood at least twice a week,¹ give them these reasons:

LIVE (HEALTHIER) LONGER

- **Fish literally saves lives.** Eating seafood two to three times per week reduces the risk of death from any health-related cause by 17 percent.²
- Seven out of 10 deaths in the U.S. are preventable through nutrition and lifestyle changes, like adding omega-3s to your diet. **Low seafood intake contributes to 55,000 deaths each year**, making seafood deficiency a leading dietary contributor to preventable death in the U.S.³
- Older adults with highest fish consumption **lived an average of 2.2 years longer**.⁴

SEAFOOD IS A PROTEIN WITH BENEFITS

- **Seafood sits among the highest-quality proteins (like eggs, meats, poultry and dairy) and offers additional health benefits.** It can reduce your risk of heart disease, improve how you feel during pregnancy and help your child develop a healthy brain and eyes, and improve memory and sharpness.^{2,5,6}
- Leading health organizations recommend Americans **eat seafood at least twice a week**.¹

SEAFOOD IS DELICIOUS, VERSATILE, BUDGET-FRIENDLY AND FAST

- From delicate, mild flounder to rich, flavorful salmon, or sweet and savory shrimp, **seafood can please any palate.**
- **Seafood fits with all of your favorite flavors** — it can be incorporated into a spicy Latin dish, flavorful Creole recipe, light and refreshing salad, or a rich Italian pasta bowl.
- Fresh, local, seasonal catches are **easy on the wallet**, as are frozen options and canned seafood, like tuna or salmon.
- From start to finish, fresh, frozen, or canned **seafood can make a meal in 15 minutes or less.**

FISH IS BRAIN FOOD

- “As calcium is to the bones, DHA is to the brain,” says Dr. Tom Brenna, member of the 2015-2020 Dietary Guidelines Advisory Committee. **Seafood provides docosahexaenoic acid (DHA), a type of omega-3 essential for brain development and function**, helping neurons trigger and cells regenerate. It is such an important building block that people with low levels of it have measurably smaller brains!⁶
- The FDA and EPA agree seafood consumption is especially important for pregnant or nursing women because eating fish regularly helps with the growth and development of children's brains and even helps boost IQ. **Babies from moms who ate seafood twice a week had a higher IQ averaging 5.8 points**.⁷
- **People who regularly eat fish are 20 percent less likely than their peers to have depression**.⁸ In fact, the American Psychiatric Association has endorsed the fatty acids in fish as an effective part of depression treatment.

How You Can Help SNP

Thank you for helping to support the mission of SNP. Throughout the year, there are many ways we invite you to engage with us in our communications and outreach efforts.

- **Tag SNP on Social Media:** When you and your company tweets, posts, or shares photos and recipes on social media, tag Seafood Nutrition Partnership and use the hashtag **#Seafood2xWk**.
- **Provide Content:** The SNP communications team is always looking for new articles, blog ideas, and recipes to feature. If you have some fresh content, please share it. We'll credit and tag you when appropriate.
- **Utilize SNP's Resources:** We have endless resources such as infographics, recipes, fun facts, and more, available on our website. Feel free to share our resources with your stakeholders. Need a hard copy of something? Reach out to Valerie (valerie@seafoodnutrition.org) and we can help you.
